CS3009 - Software Engineering - Spring 2026
Deliverable 1

Open Date - Feb 09,2026 Close Date - Feb 28,2026(11.59)pm

You are required to submit below work products in this deliverable:

1. Project team info
2. Sprint 1
3. Deliverable 1

Instructions

1. This implementation language must be JAVA, and must be business management system.

2. Each deliverable must be submitted on or before the indicated due date. Teams(must of three students) will not be allowed to proceed to a subsequent project phase without submitting a satisfactory deliverable for the previous phase.
3. Each deliverable document must have a title page indicating the project title, deliverable name, team name and membership, and submission date

A- Project team info - PDF

Submit a PDF document containing the following:

- Introduce your team:
  - Give your team a unique name
  - Team Logo
  - Provide a group picture of the entire team.
- One team member who will serve as Team Lead
- Introduce each team member:
  - Include a picture and a 50 word biography of each team member.
  - A biography should be professional as if you were introducing yourself to a prospective employer.
  - Each team member needs to create a GitHub account. Include each member's GitHub account name in the writeup.
- Assign Roles to Team members from Possible Roles
  - Product Owner /Project Manager
  - Scrum Master
  - (Requirement) Analyst/Architect
  - Developers
  - Testers
  - UI Designer

- Discuss every aspect of the team agreement in detail and describe all your decisions
    - methods of communication (email, phone, messenger, text, ...)
    - communication response times (email, phone, messenger, text, ...)
    - meeting attendance (when to meet, whether all meetings are mandatory, ...)
    - running meetings (when, where, face-to-face vs. online, who takes minutes/notes, ...)
    - meeting preparation (whether preparation is needed, what to prepare, ...)
    - version control (what to/not to commit, content of log messages, ...)
    - division of work (how to divide work, who will decide who does what, .Identify ``stakeholders''..)
    - submitting assignments (when to submit, who will submit, who will review the submission, ...)
    - contingency planning (what if a team member drops out, what if a team member consistently misses meetings, what if a team member is academically dishonest, ...)

B- Development Methodology-Scrum

You have to submit the following contents for Sprint

1. Sprint Backlog for Sprint 1 including

a. Name the module that you want to develop in Sprint 1

b. User stories you have selected to be developed in Sprint 1 and their sub user stories (in proper user story template).

c. Write four structured specifications for any of the user stories.

2. Scrum Board

a. Three snapshots of TRELLO message board showing three different stages of your sprint backlog. i. NOTE: Trello (https://trello.com/) is an online message board maintenance application. Make an account and start exploring it. Upload your sprint backlogs on it and keep it updated throughout the project. You will have to submit 3 snapshots for each sprint in all the forthcoming deliverables. (Leads will make the Trello board)

ii. For Sprint 1, take snapshot1 when you will upload your backlog, snapshot2 in the middle of the project when you will be done with almost half of your user stories (if you have multiple) or tasks, and snapshot3 at the end of the project when you are supposedly done with your planned user stories and tasks.

iii. It is possible that you might not be able to complete your planned user stories and tasks in due time so in this case you can move your left overs to Sprint 2. Show such stories or tasks as LEFTOVER of Sprint one in Snapshot3.

iv. Make a product burn-down chart for Sprint one showing planned tasks versus completed tasks for Sprint 1.

C- Deliverable 1 document (2-3 page PDF)

- Introduction
- Project vision

- Intended use of the system: who and how will use the system
    - Identify stakeholders
    - Identify their needs
- Features/Overall functionality:
    - What will the system do
    - How will the system help its users accomplish their tasks
- User stories
- Structured specifications for all of the user stories and sub-user stories.
- Scrum Board
- NFR Specification using natural language specification
- Iteration 1 implementation screen shots
- Work division
