

Q5:

Assume $h1, h3, h4, h6$ are known to switch

(a)

Only traffic from $h1$ & $h6$ to $h3$ or $h4$:

• Flow entries:

Priority 10: $ip_src = h1, ip_dst = h3 \rightarrow$ Action: forward to $h3$

" 10: " $= h1, " = h4 \rightarrow " : " h4$

" 10: " $= h6, " = h3 \rightarrow " : " h3$

" 10: " $= h6, " = h4 \rightarrow " : " h4$

" 1: $ip_dst = h3$ " : drop

" 1: $ip_dst = h4$ " : drop

(b)

* Flow entries:

- Priority 10: ip-proto = 8, ip-dst = h3 → Action: forward to h3
- " 10: " = 8, ip-dst = h4 → Action: " h4
- " 1: ip-dst = h3 → Action: drop
- " 1: " = h4 → Action: drop

(c)

Flow entries:

- Priority 10: ip-dst = h3 → Action: forward to h3
- " 1: " = h4 → " : drop

(d)

Flow entries:

- Priority 10: ip-src = h1, ip-dst = h3, ip-proto = 17 → Action: forward to h3
- " 1: ip-dst = h3 → Action: drop
- " 1: ip-dst = h4 → Action: drop
