
Computer Networks Lab

Fall 2025

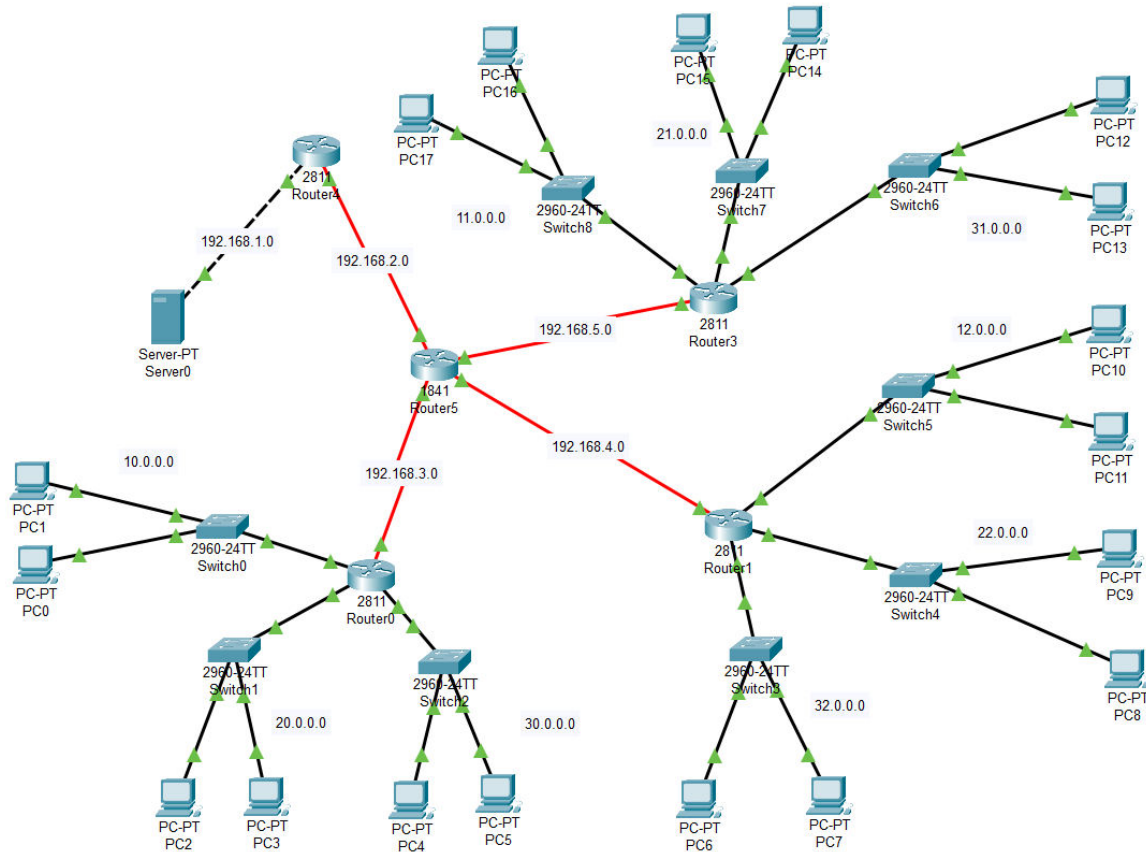

Week 10

Dynamic Routing using RIP

Lab Task

Task 1: Routing using RIP

Construct the topology given below, configure RIP in it, configure all the interfaces serial and Fast ethernet, send the PDU and show the results:

For serial ports, you have to add physical ports if necessary. (hint: WIC-2T for router 2811 and 1841)

Server:

- You have to configure an additional DNS server for DNS setup.
- For web server, enter your roll number and Name in the html file (index.html) and also add screenshot of this in the report.

Submission Instructions:

Two files are required for submission:

- **Cisco Packet Tracer File (.pkt):**
 - File name format: Section_RollNumber.pkt
 - Must contain complete working topology with all configurations saved
- **Documentation Report (Word or PDF):**
 - File name format: Section_RollNumber.docx or .pdf
 - Must include: Network topology diagram, router configurations, routing tables (show ip route screenshots), connectivity testing (minimum 4 ping tests), Web server browse screenshot showing your roll number and name.

ALL screenshots in your report must display your Roll Number using the Note tool in Cisco Packet Tracer. Screenshots without roll numbers will not be accepted
